REMARKS

During the week ending the 30th November, 1946 in British India and in the Indian States shown in this statement, the total number of deaths recorded in 229 towns having a population of 30,000 and over was 9,892. The mid-year estimated population of these towns was 26,236,408 and the death rate was 19·6 per thousand of the population. Births in the same towns numbered 19,125 giving a birth rate of 37·9 per thousand of the population. In British India alone the corresponding birth and death rates were 37·8 and 19·9 per thousand of the population respectively.

(A) *British India*.—The following towns in British India, returned a death rate of 50 or over per thousand of the population.

Palam Cottah (57·4) and Benares (54·0).

The high death rate in Benares was mainly due to deaths from fevers. In palamcottah none of the specific causes of death seem to be responsible for its high death rate.

NEW DELHI (INDIA); }
